

Day 1

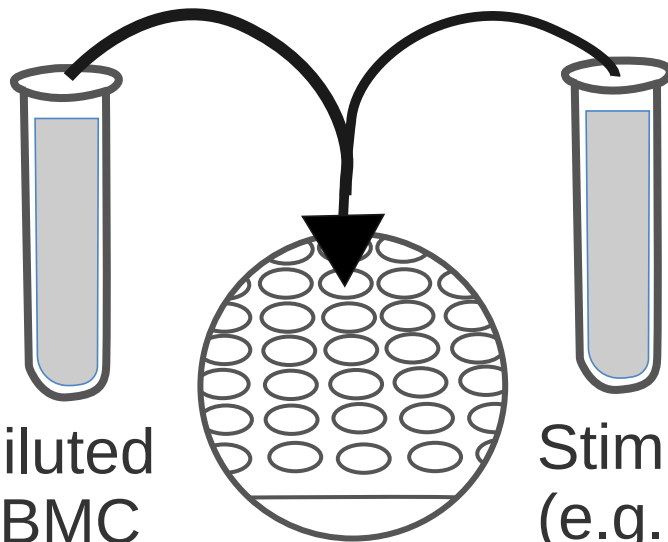

Isolate PBMC
from blood sample

**Coat plate with
capture antibody
(e.g. anti-IFN- γ)**

Day 2

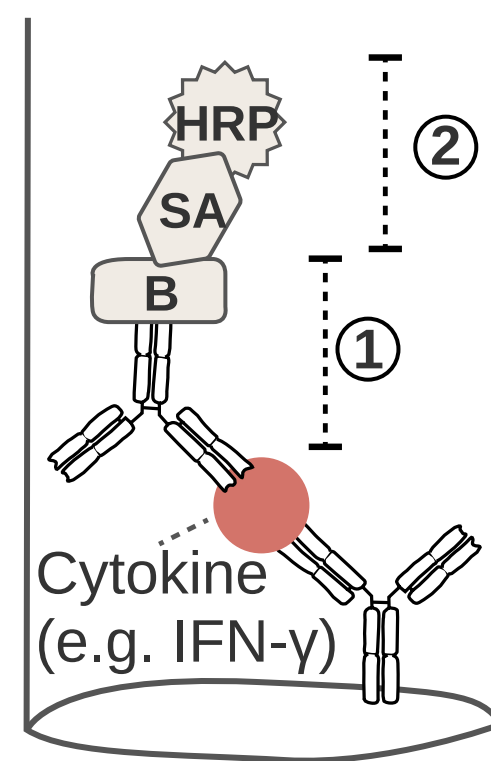

Diluted
PBMC

Stimulus
(e.g. drug)

Incubate 18-20 hours

Day 3

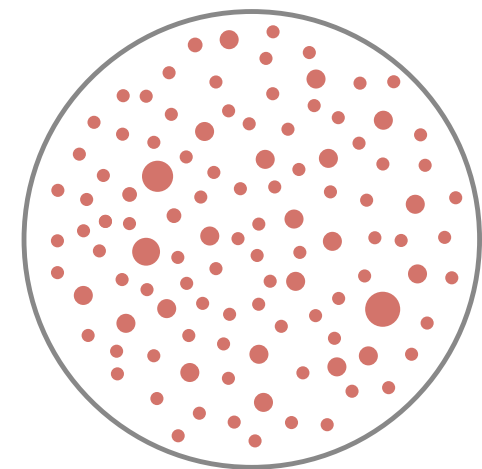

Cytokine
(e.g. IFN- γ)

Two-step detection

- ① Biotinylated detection antibody (B)
- ② Streptavidin (SA)-HRP conjugate

Day 4

Read plate
