? Multiple Suspects

Patient with DRESS on concurrent antibiotics

- **Piperacillin-tazobactam**
- **Vancomycin**
- **Cefepime**
- **Metronidazole**

Which drug caused it?

HLA-A*32:01 Positive

HLA result narrows causality:

Piperacillin-tazobactam

▸ **Vancomycin** **— Most probable culprit**

Cefepime

Metronidazole

HLA-A*32:01 strongly associated with vancomycin-induced DRESS

Low population PPV → high clinical utility for adjudication
